Project Priority Matrix

This priority matrix is designed for the Eye-Tracking Browser Extension. Due to the importance of timely delivery, the project must minimize development delays; budget overruns are acceptable if needed, "but accuracy and reliability can be enhanced to improve overall performance, while still keeping time as the primary constraint.

Cost	Performance	Time	Criteria
		●	Constrain
	●		Enhance
●			Accept

Explanation (Concise Version)

- **Time (Constrain):** Must meet the fixed delivery deadline (by April 15, 2026) so the extension is ready for the next academic year. Every effort should be made to reduce development delays.
- **Performance (Constrain):** Accuracy of eye-tracking, responsiveness of auto-pause and rewind features, and overall reliability cannot be compromised.
- **Cost (Accept):** Budget is flexible up to EGP 150,000. Exceeding the budget is acceptable if necessary to ensure the constrained time and required performance are met.
